DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1-23 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-13 and 16-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's prior figure 2, and Lambropoulos et al. (U.S. Patent # 4,611,154).

Applicant's prior art disclose the claimed invention a low drop-out voltage regulator figure 2, including a pass device (figure 2, item 201), a bias driving stage (figure 2, item 203), a filter capacitor's figure 2, item 213), a parallel impedance, a serial impedance transistor (figure 2, item 203), parallel arranged transistors (figure 2, item 201 and 203), However applicant's prior art does not disclose the utilization of the technique for

impedance connected between gate of pass device and bias driving stage.

Lambropoulos et al. teaches the utilization of the technique for impedance being connected on one side of the biased driving stage and on the other side to the gate of a pass of the LDO. Lambropoulos et al. teaches the utilization of the similar technique for impedance being connected on one side of the biased driving stage and on the other side to the gate of a transistor Q1 (figure 4, item 44 and column 8, 50-60). It would have been obvious one having an ordinary skill in the art at the time invention was made to modify Applicant's prior art by utilizing a technique taught by Lambropoulos et al. for the purpose of increasing the stability of voltage regulator.

Allowable Subject Matter

3. Claims 14-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rajnikant B. Patel whose telephone number is 571-272-2082. The examiner can normally be reached on 6.30-5.00; m-f.
